

To Whom It May Concern,

05/20/10

Salmon Lodge # 1620 obtained the services of FDJ Engineering & Construction, Inc. in April 2010, to conduct an energy audit of our forty seven year old lodge building.

Our lodge energy bills have been escalating over the past several years. We knew that the building had severe deficiencies but were not certain what or where they were in the structure. We have limited resources and were uncertain what improvements were most critical. Given our resources it is imperative that the investments and improvements be made in the most critical areas, where we can get the most "bang for the buck."

Mr. Dave Jakovac and his staff came to our rescue. They conducted an energy audit that included a blower door testing with infrared P660 Flir camera inspection, a building air tightness test and physical inspection. The results of that test visually demonstrated not only the deficiencies associated with our doors, windows, insulation and seals but also in the structure, roof and ventilation as well.

There is no doubt that the service provided by Mr. Jakovac discovered the "issues" within our lodge. There is also no doubt that the information has allowed the trustees to develop a logical approach to addressing the problems.

I was so impressed by Mr. Jakovac's technology and expertise I asked that he do a similar audit on my twenty year old residence. After his study I now have a better understanding of my home and what I need to do to make it more energy efficient and structurally sound.

I would recommend Mr. Jakovac's services to any builder, renovator and remodeler as well as anyone considering buying a structure. It is a factual, cost effective way to "prove-out" the structure.

Sincerely,

Roy Barrett
Trustee, Salmon Elks Lodge # 1620
